

Orbit

AI-POWERED INTERACTIVE TRAVEL GUIDE

● THE PROBLEM

Map and review apps show **too much undifferentiated choice**.

Travelers and locals struggle to find interesting, context-rich points of interest in real time, often missing hidden gems while endlessly scrolling through generic lists.

● WHAT IT IS

Orbit helps you explore a city on your own terms. By combining a map pin with a short taste profile, it curates a small set of places you might actually visit—each with a clear **"why you"** explanation.

Unlike static map apps, Orbit adapts to your location and interests to proactively surface relevant places and provides a **conversational, context-aware audio tour guide experience** as you explore.

Try it yourself!

Grab the demo device on the table to drop a pin and set your mood, or **scan the QR code** to try Orbit on your own iOS device via TestFlight.
